

Let's Learn English With Artificial Intelligence

Project Description: Our project consists of eight English teachers from various cities of our country and different countries. With today's technological developments, foreign language teaching has reached a different point. Foreign language teaching has gained a realistic dimension with different artificial intelligence applications. Foreign language teaching with Generation Z will reach different dimensions with artificial intelligence applications.

Goals: Our goal in our project is to enable our students, who cannot benefit from books while learning a foreign language today and have difficulties with grammar subjects, to learn a foreign language with artificial intelligence applications in the digital environment. In our country, our students have the most difficulty in speaking a foreign language. We aim to increase our students' foreign language speaking skills with artificial intelligence applications. By using web 3.0 tools, our students will take an important step in today's world of digitalization. With digital technologies, our students' capacity to produce creative ideas will improve. Artificial intelligence has the capacity to provide students with personalized language learning experiences. Additionally, artificial intelligence can accelerate language learning with the ability to provide instant feedback to language students.

Work Process: We will work in cooperation with partner schools in our project. We will decide with our teachers on the activities that each school should do month by month and produce joint products.

Expected Results: When we finish our project, our students will gain foreign language learning, especially speaking skills, with many artificial intelligence applications in the digital world. We will overcome the speaking problem, which is the biggest problem in foreign language education in our country, with the work we have done by our students. Artificial intelligence will provide students with personalized language learning experiences. Artificial intelligence will accelerate language learning with the ability to provide instant feedback to language students.
